

Amr Ramadan

Senior Flutter Engineer · Fintech & Mobile

Cairo, Egypt amr.raamadan@outlook.com +20 106 532 8644 [github.com/Atevaz](#) [LinkedIn](#) [Portfolio](#)

SUMMARY

Flutter engineer with 4+ years of professional experience building secure, scalable mobile apps for fintech, syndicate services, ERP, and e-commerce. At NeQabty, a fintech platform that digitizes syndicates and unions in Egypt, I build payment, subscription, and medical-insurance flows used by thousands of members. I work mainly with Dart, BLoC/Cubit, Clean Architecture, dependency injection, REST APIs, and real-time streams (WebSocket, WebRTC). I also have hands-on experience with mobile security, performance tuning, native Android/iOS integration, and CI/CD. I've shipped production apps for users in Egypt, Saudi Arabia, and Jordan.

TECHNICAL SKILLS

Core	Dart, Flutter, asynchronous programming (Futures, Streams), custom animations, responsive UI
Architecture	Clean Architecture, MVVM, SOLID, Dependency Injection (get_it), OOP, Flavors, Localization
State Management	BLoC / Cubit, Riverpod, Provider, GetX
APIs & Real-time	REST APIs, WebSocket, WebRTC, GraphQL, Firebase (Auth, Firestore, Cloud Functions, FCM), push notifications, deep links
Fintech & Payments	Payment gateway integration, subscriptions and renewals, insurance and claims flows
Security	Certificate pinning, secure storage, code obfuscation, encryption, authentication and access control
Performance	Flutter DevTools (memory profiling, jank detection, rebuild tracking), app size and build optimization, background services
Native	Method Channels, native SDK integration (Kotlin / Swift plugins)
Testing & DevOps	Unit, widget, and integration testing; CI/CD (GitHub Actions, Fastlane); Git; App Store & Play Console releases
Storage	Hive, SQLite, offline-first architecture

PROFESSIONAL EXPERIENCE

Flutter Developer · NeQabty (Fintech)	05/2025 – Present · Cairo, Egypt
- Building the new version of the Egyptian Engineers Syndicate app: annual membership subscriptions, medical healthcare and insurance renewal, dependents management, and medical claims. - Built and maintain a subscription system with secure online payments, which makes renewals and payments simpler for members. - Led the member-support AI assistant (text-to-text and voice-to-voice: speech-to-text, streamed answers, text-to-speech), cutting response time by 40%. - Implemented certificate pinning, secure token storage, encryption, and access control to protect members' personal and financial data. - Set up dev / staging / prod flavors and a CI/CD pipeline with GitHub Actions and Fastlane (obfuscated, signed releases to TestFlight and Play). - Structure features with Clean Architecture, BLoC/Cubit, and dependency injection so modules stay testable and easy to maintain.	
Flutter Developer · SDS	05/2024 – 05/2026 · Part-time, Remote (Jordan)
- Designed and built mobile ERP modules for HR, Finance, Inventory, and Sales, improving operational efficiency by 30%. - Integrated real-time ERP APIs to keep data and dashboards in sync across departments. - Added role-based access and multi-language support, which helped more user groups adopt the app.	

Flutter Developer · Code700

01/2024 – 10/2024 · Remote (Saudi Arabia)

- Built e-commerce apps with product catalogs, checkout, and secure payment gateways; revenue grew 15% in the first quarter after launch.
- Developed video streaming features: upload, playlists, deep linking, picture-in-picture, and background playback.
- Set up CI/CD pipelines and multiple build flavors, making deployments 50% faster.

Flutter Developer · TX

01/2023 – 01/2024 · Remote (Saudi Arabia)

- Integrated native Android and iOS code through Method Channels to add platform-specific features.
- Built real-time audio and video calling with WebRTC, increasing user retention by 25%.
- Built efficient background services that improved battery life by 20%.

Flutter Developer Intern · Magdsoft & Algoriza

06/2022 – 10/2022 · Cairo, Egypt

- Built e-commerce features with Flutter and Firebase (real-time product listings, authentication, cart) using BLoC/Cubit.
- Worked on a hotel booking app: search filters, real-time availability, payments, and REST API integration.

SELECTED PROJECTS

Egyptian Engineers Syndicate – New Version Release pending

Android & iOS · NeQabty

- Members' app for the Engineers Syndicate: annual subscription renewal and online payment.
- Healthcare and medical insurance: coverage renewal, dependents management, medical claims with status tracking, and a medical network guide.
- Protects members' personal and payment data with encryption, authentication, and access control.

Tech: Flutter, Dart, BLoC/Cubit, Clean Architecture, Dependency Injection, REST APIs, Payment Gateway

NeQabty Live on stores

Android & iOS

- Fintech app for syndicate and union members: membership renewal, subscription tracking, and online payments.
- Google Maps integration to find nearby pharmacies and service centers.
- BLoC handles secure sessions, payments, and subscriptions.

Tech: Flutter, Dart, BLoC, Firebase, Payment Gateway, Google Maps

Car Market Association (رابطه سوق السيارات) Live on App Store

iOS

- Membership app for car-market traders: member registration, subscription renewal with online payment, and association services.

Tech: Flutter, Dart, BLoC/Cubit, REST APIs, Payment Gateway

Qaaf Live on stores

Android & iOS

- Video streaming app: upload, channels, playlists, deep linking, picture-in-picture, and background playback.
- BLoC manages playback, uploads, and background services; CI/CD pipelines with multiple flavors speed up releases.

Tech: Flutter, Dart, BLoC, CI/CD, Flavors

Jomlah Express Live on stores

Android & iOS

- Wholesale e-commerce app with catalog browsing, secure checkout, and order tracking with Google Maps for delivery.

Tech: Flutter, Dart, Firebase, REST APIs, Payment Gateway, Google Maps, Provider

Catwa Live on stores

Android & iOS

- Pet food shopping app with catalog, cart, and delivery scheduling.

Tech: Flutter, Dart, Firebase, Google Maps, Provider

EDUCATION

Bachelor of Computers and Artificial Intelligence · Helwan University

2018 – 2022 · Cairo, Egypt

- Graduation project: nutrition-planning app that uses a TensorFlow image-recognition model to estimate food nutrients, with a Flutter frontend and Firebase backend.
